

## SAFE

New stoves reduce the risk of chimney fire. Wood Energy Technical Training (WETT) professional installation and certification is supported by the home insurance industry.

## EFFICIENT

New stoves burn hotter and slower, reducing smoke output by 70% and consuming 1/3 less cord wood.

## HEALTHY

New technology stoves reduce fine particulate matter in wood smoke. This is important because these fine particles are inhalable and can settle in the lungs.

## BC AIR QUALITY

The BC Air quality website has links to the Provincial Wood Stove Exchange Program and many other air quality programs such as the provincial *Idle Free* initiative.

# Wood Stove Exchange Program

**Rebate voucher forms available**  
**Offer expires December 31, 2024**

Wood to Electric Insert \$400  
Wood to Wood—\$500  
Pellet Stove—\$750  
Wood to Heat Pump \$1,000

## AIR QUALITY

The goal of the rebate program is to help reduce neighbourhood wood smoke.

- Reduced smoke means reduced fine particulate air pollution — smoke from burning vegetation is considered one of the most serious kinds of air pollution in British Columbia.
- Exposure to high levels of particulates can play a role in many kinds of respiratory diseases.

The rebate program encourages you to exchange your old, uncertified stove for a new EPA or CSA emission certified wood, pellet, electric insert or heat pump.

Rebates are available on a first-come, first-served basis for Strathcona Regional District residents.

## Step 1: Qualify

In order to qualify, the appliance being exchanged must presently be used for heating purposes in your home and must be a non CSA / EPA certified stove built prior to November 1, 1994. Or exchange a certified wood-burning stove (pre 2015) for non-wood burning options including a heat pump, certified pellet stove or a certified electric insert. Your retailer can assist you with confirming this step. Take a picture of the old stove, fireplace or wood burning furnace in use. Check with participating retailers to confirm that your new stove qualifies and whether there are any additional manufacturer rebates available. Call or email the Regional District to confirm rebate availability.

## Step 2: Voucher Tracking Number

Call or email the Regional District (see contact info on reverse) to receive a tracking number and complete a voucher. Tracking numbers will only be reserved once a deposit on the new stove is made.

## Step 3: Installation

The Regional District will require a copy of the appliance purchase receipt and a photo of the newly installed appliance.

## Step 4: Inspection/Compliance

A copy of the WETT inspection report (if installing a wood or pellet stove) must be submitted with your rebate voucher. Talk to your retailer for more information.

## Step 5: Old Stove Disposal

Participating retailers will ensure that your old appliance is decommissioned and recycled. Please have them sign and date your voucher verifying this step was completed and have them take a picture of the decommissioned stove.

## REBATE CHECKLIST

- Completed voucher including signed declarations
- Photo of your old wood stove in use
- Copy of your new appliance purchase receipt and photo of your newly installed appliance
- Copy of the WETT inspection report
- Photo of the decommissioned old stove

## STEP 6: Collect Your Rebate!

Mail, email or drop off your completed voucher, photos and receipts (as per the rebate checklist) to the Strathcona Regional District (contact information on reverse). Please keep a copy of all paperwork for your own records. We will electronically transfer payment or mail you a \$400 or \$500 or \$750 or \$1,000 rebate. All rebate vouchers must be filled out and received by the Strathcona Regional District **no later than December 31, 2024.**
